Education

University of Maryland – B.S. in Computer Science 2024

GPA: 4.0, *summa cum laude*

Coursework: Java, C, Algorithms, Data Structures, AI, Language Structure, Linux, Calculus, Linear Algebra, Statistics, Game Programming, Computer Vision, Web Development, App Development

Work Experience

Backend Software Engineer (L3), Commure, San Francisco, CA 2025

- Claims with minor errors, like a misspelled name, were being denied in full; worked with Operations to build an algorithm that fixes these errors using the customer's previously accepted claims, shipped as a Python FastAPI service on GCP/Kubernetes, raising paid claims by 100K+ a year"
- Used AI tools for daily testing and refactoring, checking every output locally on isolated Postgres data; kept coverage above 90%, iterated $\sim 7\times$ faster, and was invited to Commure's internal "Claude Coders" group

Robotics Research Assistant, University of Maryland, College Park, MD 2022–2024

- Iterated through 6 designs of an emergency human override for an AI scooter; published the final one in an [IEEE paper](#)
- Integrated Feather and Jetson Nano hardware and software, tested on the physical scooter, and cut response latency from over 1 second to single-digit milliseconds

Robotics Internship, University of Maryland, College Park, MD 2023

- Cut build time for a 30 ft drop-proof custom robot from months to weeks by evaluating in-house vs. external designs and selecting the more faster-to-build one
- Met the deadline despite unclear direction by defining constraints and setting success metrics

Projects

Pokémon GO GBL Team Generator, Node.js, [GitHub](#) 2026

- Wrote a genetic algorithm on pvpoke's battle engine that simulated 443,923 3v3 battles across my 107 Pokémon to find strong teams; climbed 600 rating points with them, from Ace to Expert

Deadlock Optimal Build Finder, TypeScript, React, [GitHub](#) 2026

- Built a browser app that generates a build for each of the 38 heroes from what high-rank players bought and won with in the last 30 days; builds match top players' purchases at a 74% median
- Generates a separate build per playstyle (e.g. gun vs. spirit Warden) from that style's games

Additional Information

Programming Languages: Python, JavaScript, TypeScript, Kotlin, C++

AI Tools: Claude Code, Cursor, ChatGPT
